Abstract (Basic): FR 2698269 A

New medicaments comprise: (a) phosphatidylcholines (PCs) or lysophosphatidylcholines (LPCs) in which docosahexaenoic acid (DHA) constitutes at least 70% of the fatty acids in the sn-2 position or (b) LPCs in which DHA constitutes at least 10% of the fatty acids in the sn-2 position. Also claimed is the use of DHA or its derivs. esterified in the form of PCs or LPCs for the prepn. of (a) a medicament with platelet aggregation inhibitory activity, esp. for treatment or prophylaxis of cardiovascular disorders, or (b) a medicament for treatment of cerebral essential fatty acid deficiency.

USE - The medicaments may be used for treatment or prophylaxis of atherosclerosis and for treatment of cerebral essential fatty acid deficiency in premature or sucking infants or malnourished or geriatric patients. (I) is a thromboxane A2 (TXA2) antagonist and may thus be used to inhibit platelet aggregation and to treat hypertension.

Abstract (Equivalent): US 5654290 A

A drug composition comprising a therapeutically effective amount of at least one compound selected from: DHA esterified in the form of lysophosphatidyl-choline (lyso-PCDHA) in position sn-2; DHA-phosphatidylcholines (PCDHAs) in which DHA is esterified in position sn-2 and which have an 2-6C acyl group in position sn-1; and triglycerides in which DHA is esterified in position sn-2 and which have 2-6C acyl groups in positions sn-1 and sn-3.
